

Intelligent Finance: Enabling Growth Before and After Business Expansion

How are enterprises around the world managing to grow and scale their business? And what can you learn from their experiences? A new survey of 500 finance and IT executives in enterprise and small-to-midsize companies – conducted by Oxford Economics and SAP – reveals valuable findings.¹

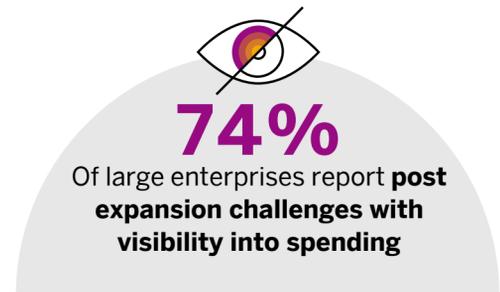

Enterprises are pursuing growth to scale their success.

Top reasons enterprises underwent their recent expansions:

During pre- and post expansion, growth is rarely easy.

Finance leaders report spending more time on day-to-day tasks such as:

Adding more headcount doesn't solve the problem – and can create new headaches.

As companies increase headcount, they report spending **more** time on:

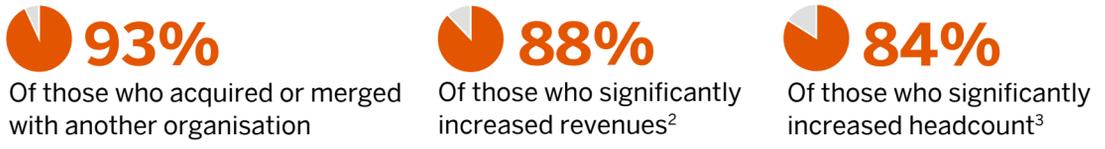

- Spend and cash flow management
- Expense report processing
- Aligning growth strategy with internal stakeholders
- Financial planning and analysis

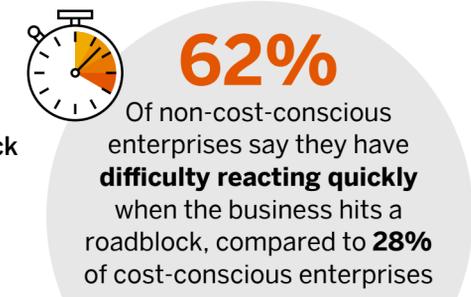

But cost-consciousness greases the wheels of successful expansion.

Businesses with fast profit growth factor cash flow heavily into expansion-related decision-making, including:

A focus on costs improves performance in non-spend-related areas such as:

- Speed of recovery after encountering a roadblock
- Breaking down silos between business units
- Corporate culture and employee satisfaction

Intelligent spend and cost controls enable efficient growth – without additional headcount.

Companies are implementing new technologies to support growth. According to survey respondents:⁴

It's time for IT and finance to join forces and enable intelligent finance.

With SAP® Concur® solutions, IT leaders can **drive the new level of efficiency with intelligent automation** on travel, expense, and invoice handling. Finance leaders can **achieve full visibility** into employee spending and costs they need to be effective. Together, they can transform cash flow and discretionary spend management in ways that fuel growth strategies.
